Problem setting. The complexity and diversity of contemporary issues of socio-economic development of Ukraine and its regions lead to increased academic interest in the choice of means, methods and mechanisms of its learning and overcoming. More and more researchers have come to a conclusion on methodological constructive integration of scientific achievements in various fields of knowledge and involvement of innovative socio-economic research. The most common method among the methods that have the ability to interdisciplinary is the systematic method.

Paper objective. Using systematic method in studies of regional systems, their subsystems and components, today does not have the necessary distribution to the task of forming integrated regional development policy.

Paper main body. Component structure of the regional system’s formation can be represented in the form of related administrative, economic, social and environmental subsystems. Based on the abovementioned, each of the subsystems has its own function and purpose. For economic subsystem function of economic subsystem is to achieve as high as possible the welfare of residents of the region, and the goal is to provide an annual rate of economic growth during the period. The function of the social subsystem can be considered as the creation of conditions for formation of safe social environment for people in the region, the purpose is to strengthen effective mechanisms of social life-support of the person. The function of the environmental subsystem is to develop environmentally safe nature surroundings for the life and health of the population of the region, the introduction of ecologically balanced system of wildlife management and conservation of natural regional’s ecosystems. The purpose of this subsystem is to improve the environmental situation in the region and enhance environmental safety, achieve safety condition of the environment for human health. As a function of the management subsystem can be offered permanent ensure the
existence of regions in their optimum situation of development. The purpose of the subsystem will be to harmonize the goals of regional development and the resources needed to achieve the goals. Thus, it can be noted that the management subsystem has properties that allow it to aggregate not only the elements of the subsystems of the regional’s formation, but also the external environment, suppress negative impacts, launch mechanisms of self-organization, and in sort set the direction of the development.

Conclusions of the research. So, formulation and implementation of integrated policy of the development of the region should be provided on the basis of a systematic approach of the compatibility and the synergies of the purposes of the state regional policy and objectives, which are made by the management subsystem of the regional system formation.
