Problem setting Culture of behavior in the field of nature management, that considers human as the center of the universe, but the suppressing diversity of life on Earth, following the principle of violence against nature, has become widespread. Therefore, countries are striving to formulate their environmental policies in such a way as to regulate the planned use of natural resources and provide financial resources for their restoration. According to the Constitution of Ukraine, every citizen has the right to a safe environment for his life and health, therefore the actuality and significance of this problem becomes especially acute.

Recent research and publications analysis Works of famous scientists and specialists such as L. Amjadin, O. Vasyuta, O. Veklych, D. Vetvitsky, T. Galushkina, V. Dyomkin, N. Zinovchuk, G. Kozyrev, V. Kruk, N. Maievskaya, V. Martynenko, S. Marova, L. Melnyk, E. Seniushkin, I. Sinyakevich, M. Shapochka, V. Shevchuk, L. Yakushenko, L. Yatsenko are devoted to problems, formation and research of ecological policy in Ukraine. In our view, the issues of state environmental policy in Ukraine are constantly updated according to the political, economic, technological and social challenges in society and therefore require further elaboration.
**Paper objective** To analyze existing problems of implementation of environmental policy in Ukraine and ways of their solution

**Paper main body.** Despite the existence of a comprehensive list of problems in implementing the state environmental policy in Ukraine, such strategic documents as the Strategy for Sustainable Development of Ukraine until 2030 and the National Action Plan for Implementation until 2020 remain not approved at the state level.

An analysis of the state of implementation of national target programs indicates their constant underfunding, which does not contribute to the achievement of the goals.

Taking into account the future impact on the environment at the stage of planning policies, plans and programs are not legally binding in Ukraine, unlike the legislation of the European Union (EU) and the impact on the environment is not widely reflected in sectoral development policies.

An integral part of environmental policy should be the realization of tasks aimed at forming a culture of life (ecological education and education), which will contribute to the understanding of the economic, political and ecological interdependence of the modern world by humanity.

**Conclusions of the researchs.**

The development of the state ecological policy in Ukraine is to improve the environmental legislation, accelerate the process of its harmonization according to the EU legislation, which will allow to balance the legal system of the state and ensure sustainable development. Currently, the issue of elaboration of the Ecological Code of Ukraine, which is provided by the main directions of state policy in the field of environmental protection, use of natural resources, ensuring environmental safety and strengthening state environmental control, remains relevant. Today, the country faces the issue of forming a National Action Plan, the effective implementation of relevant environmental programs, therefore, research and development in these areas will be extremely relevant.
